WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Showers in the mountains Friday, and another wave of lighter rain will move through far NW CA on Saturday. Rainfall totals by early Sunday could be 2 inches in the far NW CA mountains, 0.25-1.00 inches elsewhere NW of a line from Santa Rosa-Redding-Alturas and in the N Sierra, and lighter amounts E of the crest, farther S in the Sacramento Valley and in the Bay Area.

A significant warming and drying trend is expected following the trough passage late weekend and lasting into the following week. Periods of light N-NE/Offshore winds are possible with this pattern, but no significantly strong winds are expected.

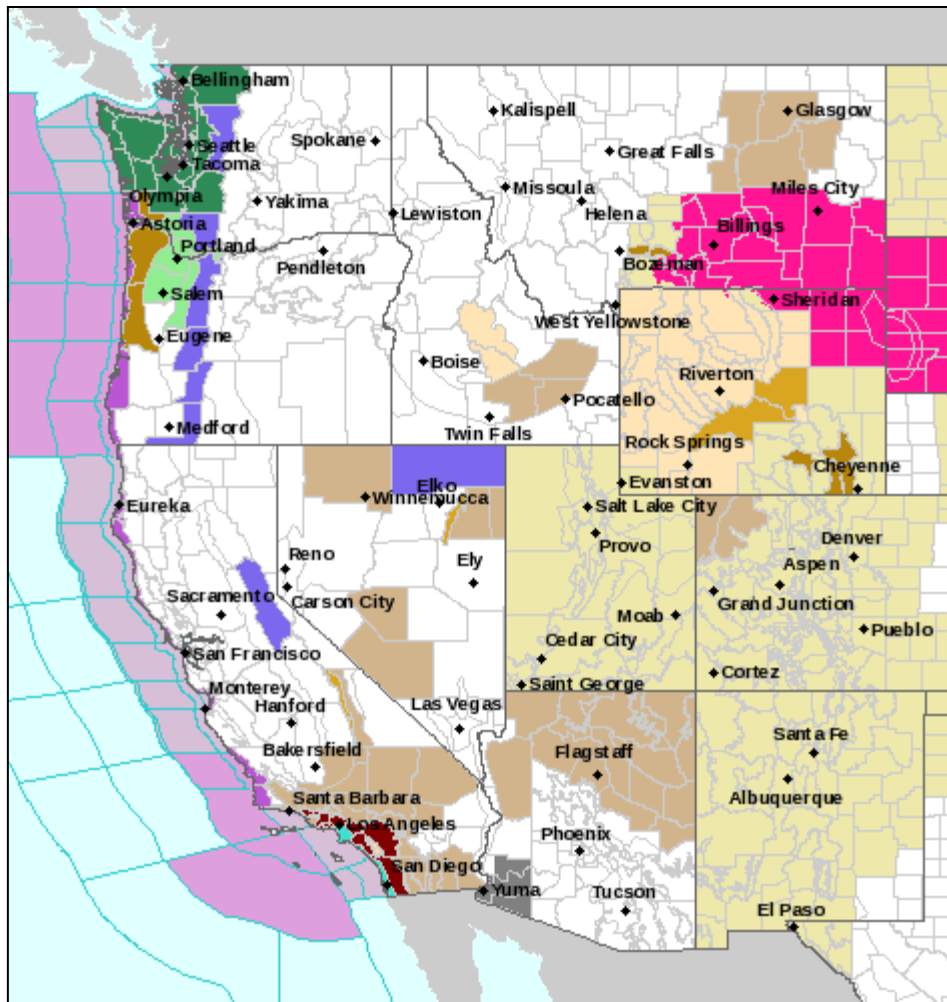

SOUTHERN CALIFORNIA

Cooler and windy across the mountains and deserts today

Hot, dry and breezy over the weekend into early next week

A strong storm system over the Pacific Northwest will usher in a short period of cooler and more humid weather the day. Temperatures will also continue to decline. Today, highs will be in the 50s in the mountains, 60s at the coast to the upper 70s in the valleys. Some light showers will be possible across the central coast and the Sierras from Yosemite N.P. northward. All precipitation amounts are expected to be under 0.25 of an inch. Further south, a deep marine layer may bring some drizzle to areas near the mountains Friday morning. It will be windy in the deserts and Sierras this evening. In general, winds will be in the 25-40 mph in the deserts and the Sierras above 8,000 feet through this evening. North winds of 20-30 mph will be possible in Santa Barbara County and the I-5 Corridor Friday into Saturday. Similar wind speeds can be expected through the Cajon Pass Saturday. The winds will transition to an offshore orientation Saturday night into Sunday morning. At this time, the strongest offshore winds are anticipated to occur Sunday night and Monday night when some gusts to 35 mph will be possible over Southern California. The offshore winds do not appear to be overly strong, but they will last for several days and may cover a wide area as opposed to the last two events which were more focused on discrete areas. The primary concern during the outlook period will be the return of very hot and dry weather as the offshore flow couples with a strong ridge of high pressure across the state. High temperatures next Sunday through Tuesday will be in the 90s in the interior valleys and foothills of Central California to 100-105 across the valleys and even the coastal areas of Southern California. Minimum Relative Humidity (RH) will be in the single digits below 6,000 feet with poor recovery at night. Cooler weather may slowly return next Wednesday or Thursday.
